Executive Analytical Working Memo & Scenario Dossier

Generated on October 25, 2026 - 06:08 PM | Session Scratchpad Audit Trail | Strictly Confidential

1. Active Investigation Scope & Baseline Regional Economics

Metric	Gujarat (West Region / Ahmedabad)	West Bengal (East Region / Kolkata)	Variance / Spread
Per-Piece Production Cost	₹188.80	₹182.50	-₹6.30 (WB lower)
Per-Piece Transportation	₹24.50	₹25.60	+₹1.10 (WB higher)
Total Landed Unit Cost	₹213.30	₹208.10	**-₹5.20 (WB cheaper)**
Base Selling Price	₹240.00	₹245.00	+₹5.00 (WB premium)
Unit Gross Margin (Spread)	₹26.70 (11.1%)	₹36.90 (15.1%)	**+₹10.20 (+4.0%)**
Monthly Units Sold	18,200 units	24,500 units	+6,300 units
Total Monthly Revenue	₹43,68,000.00	₹60,02,500.00	+₹16,34,500.00
Total Gross Profit	₹4,85,940.00	₹9,04,050.00	**+₹4,18,110.00**

2. Step-by-Step Computational Trace & Inquiry Log

#	Time	Inquiry / Instruction	Category	Deterministic Verification / Calculation
1	18:01:03	**What is the cost of per piece production of my product in Gujarat**	Production Cost	Per-piece production cost of Fresh Organic Paneer in Gujarat: ₹188.80 (reflecting +18% raw milk procurement inflation). **Formula:** `Base Milk Cost (₹148.20) + Processing & Cold Packaging (₹40.60) = ₹188.80`
2	18:01:31	**What is the cost per transportation Gujarat**	Transportation Cost	Per-piece cold-chain transportation cost in Gujarat: ₹24.50 per unit on route RT-BHW-AMD (525 km). **Formula:** `Route Freight Cost / Shipments Units Allocation = ₹24.50 / piece`
3	18:01:59	**Then add the two numbers and tell me what is the total cost I am paying for for one product**	Landed Cost Chaining	Added production cost (₹188.80) and transportation cost (₹24.50). Total Landed Cost: ₹213.30 per piece in Gujarat. **Formula:** `₹188.80 + ₹24.50 = ₹213.30`
4	18:03:19	**Okay Shona tell me how many pieces do I sell in Gujarati in a month and multiply with the total price to give me the total revenue**	Regional Unit Economics (Gujarat)	Gujarat: 18,200 units sold at ₹240.00 each. Total Revenue: ₹43,68,000.00. Landed COGS: ₹38,82,060.00. Gross Profit: ₹4,85,940.00 (11.12% margin). **Formula:** `18,200 × ₹240.00 = ₹43,68,000.00; Profit = ₹43,68,000 - (18,200 × ₹213.30) = ₹4,85,940.00`

5	18:04:13	**Now give me all the same numbers for West Bengal in place of Gujarat**	Regional Unit Economics (West Bengal)	West Bengal: Production ₹182.50, Transport ₹25.60, Landed Cost ₹208.10. Volume: 24,500 units at ₹245.00 each. Revenue: ₹60,02,500.00, Gross Profit: ₹9,04,050.00 (15.1% margin). **Formula:** `Landed = ₹182.50 + ₹25.60 = ₹208.10; Profit = (24,500 × ₹245.00) - (24,500 × ₹208.10) = ₹9,04,050.00`
6	18:05:11	**If I reduce the volume in Gujarat by 2% and add it to West Bengal calculate the profit I lose and gain**	What-If Volume Reallocation Simulation	Diverted 2% of Gujarat volume (364 units) to West Bengal. Gujarat profit forfeited: -₹9,718.80. West Bengal profit realized: +₹13,431.60. Net Arbitrage Profit: +₹3,712.80. **Formula:** `(364 × ₹36.90) - (364 × ₹26.70) = +₹3,712.80`
7	18:07:36	**So now add my executive memo to transfer 2% of the volume from Gujarat to West Bengal**	What-If Volume Reallocation Simulation	Diverted 2% of Gujarat volume (364 units) to West Bengal. Gujarat profit forfeited: -₹9,718.80. West Bengal profit realized: +₹13,431.60. Net Arbitrage Profit: +₹3,712.80. **Formula:** `(364 × ₹36.90) - (364 × ₹26.70) = +₹3,712.80`

3. What-If Volume Reallocation Scenario (Gujarat -2% -> West Bengal +2%)

Simulation Component	Exact Formula	Computed Value
Volume Diverted from Gujarat (2%)	`18,200 × 0.02`	`364 units`
Gujarat Unit Margin (Price - Landed)	`₹240.00 - ₹213.30`	`₹26.70 / unit`
Gross Profit Forfeited in Gujarat	`364 × ₹26.70`	`-₹9,718.80`
West Bengal Unit Margin (Price - Landed)	`₹245.00 - ₹208.10`	`₹36.90 / unit`
Gross Profit Realized in West Bengal	`364 × ₹36.90`	`+₹13,431.60`
Net Arbitrage Profit Balance	`₹13,431.60 - ₹9,718.80`	**+₹3,712.80 Gain**
